

Kemira is a global two billion euro chemicals company that is focused on serving customers in water-intensive industries. The company offers water quality and quantity management that improves customers' energy, water, and raw material efficiency. Kemira's goal is to be a leading water chemistry company.

Paper

Kemira offers chemical products and integrated systems that help customers in the water-intensive pulp and paper industry to improve their profitability as well as their water, raw material and energy efficiency. Our solutions support sustainable development.

Municipal & Industrial

Kemira offers water treatment chemicals for municipalities and industrial customers. Our strengths are high-level application know-how, a comprehensive range of water treatment chemicals, and reliable customer deliveries.

Oil & Mining

Today, Kemira offers a large selection of innovative chemical extraction and process solutions for the oil and mining industries, where water plays a central role. Utilizing our expertise, we enable our customers to improve efficiency and productivity.

ChemSolutions

We offer chemical products and customer-driven solutions to the food, feed, pharmaceutical and chemical industries. Utilizing our application expertise, our customers can benefit through improved profitability and enhanced product quality.

Kemira – India operations

"Make Indian Pulp & Paper Industry World Class"

The pulp & paper sector is one of the energy & water intensive sectors and offers tremendous scope to improve its environmental performance. Increase in productivity through the adoption of more efficient and cleaner technologies in the sector will be most effective towards merging economic, environmental and social development objectives.

The water, energy and environmental performance of any paper plant depends on the level of production and the technologies employed. Thus pulp & paper manufacturers are increasingly on the look out for technologies and best practices that reduce the ecological footprint of their businesses.
